Communication

The instructions in this article relate to **Communication**. The icon may be located on your *StrataMax Desktop* or found using the *StrataMax Search*.

Many areas in the program can send emails and SMS. Any reports that come to the screen can be emailed from StrataMax. There is also a facility to use the email address already stored in some of the areas in StrataMax to send these reports. These areas include Owners, Creditors, Committees, Agents, Others (Applicants) and Account Managers. Instructions are included below to explain how to use the various email functions included in StrataMax. **Search Roll**, **Search Office Bearers**, **Search Creditors** can assist with producing global lists of email addresses.

The StrataMax Support Team enables and configures emailing in StrataMax, which is called *Email Server*. Once the email server has been installed, each user must have an email address set up via **Security Setup**.

Check out the *Email Deliver-ability* article to learn more about how emails work in StrataMax.

Compose Email

StrataMax has various ways to pick up the recipient's details if entered into other areas of StrataMax. If you do not record this information, you can manually type or copy & paste the email address into the *To...* or *Bcc...* fields. This area is designed to include the contact information for each individual.

> To send an email to a large number of recipients, such as all creditors or owners, you will need to obtain a list of their email addresses. You can get these lists of owners, creditors and office bearers for multiple or all buildings for use in mass communication by using the corresponding Search. **Search Roll**, **Search Office Bearers**, **Search Creditors**.

1. Clicking the *To...* and *Bcc...* buttons will display a contacts list to choose recipients from.
2. Make a selection for *Use Preferences Email Address Purpose* with the tick box and the address priority.
3. The *Recipient Type* drop-down list consists of contacts from the following areas:
    - Owners - **Roll** / Lot Accounts.
    - Other Debtor - **Second Debtor** / **Debtor Maintenance** (available from Sub-Group).

- Letting Agents - *Letting Agents* added to a lot within the **Roll**.
- Tenant - *Tenant* contacts added to a lot within the **Roll**.
- Creditors - **Creditor Maintenance**.
- Office Bearers - These are the members assigned in **Office Bearers**.
- Applicant - **Applicant Maintenance** records used for various areas.
- Resident - Any contact flagged as *Owner Occupied* in the **Roll**.
- Internal Users - Any internal user configured in **Security Setup** with a valid email address will be available in this area.

4. Click *All* to tag all Recipients, or select *None* to remove Tags so that you can select and tag the Recipients as required.

5. Review the tagged records and click *Select* (use Ctrl + X to untag all; for more keyboard shortcuts, click here).

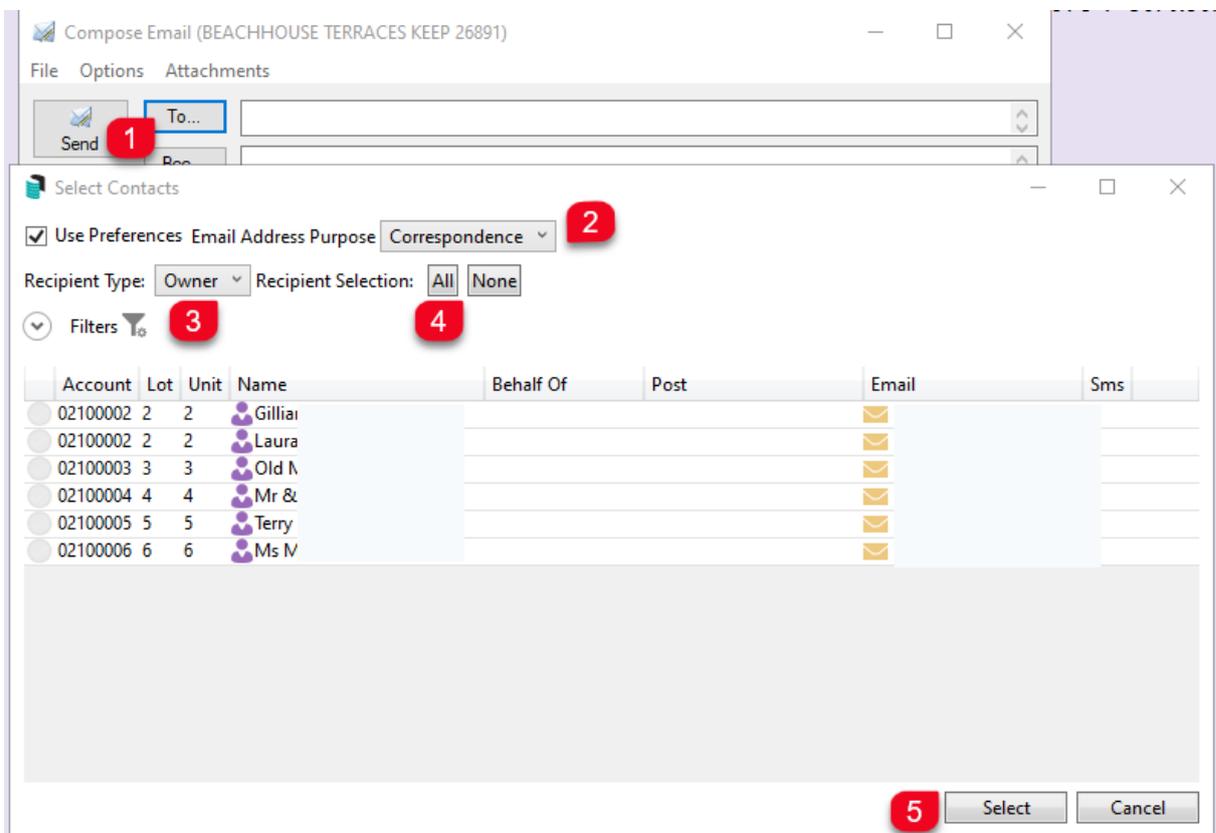

6. Expanding the *Filters* option will include the *Report Distribution* filters and allow for these to be included as needed.

7. An email subject can be typed in the 'Subject' field.

8. For attachments, see the next section below.

9. In the body of the email, text formatting can be changed using the toolbar above the email body.
   - A spell check function will underline words that have been spelt incorrectly.
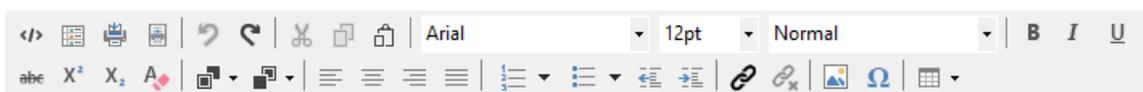

10. Click the *Send* button to send the email.
    - A warning may appear to notify you if the email is being sent to more than 20 recipients, just as a precaution in case it gets caught by spam filters, and you can choose to continue or not.

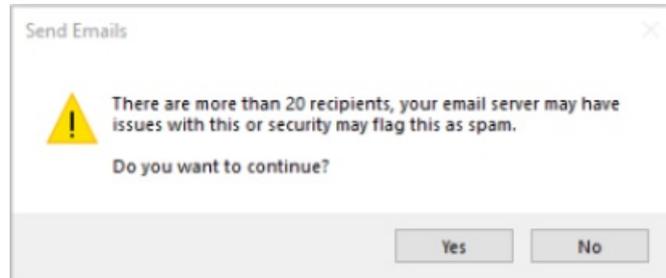

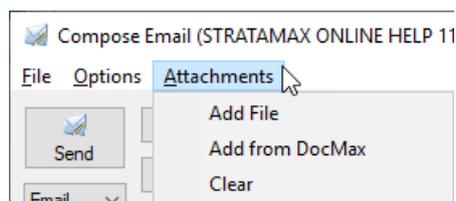

Attachments Menu

You can attach multiple files to StrataMax email, but only one attachment can be added.

> *Each* email sent from StrataMax has a total file size limit of 10 MB.

Within the *Compose Email* window, click the *Attachments* menu and then one of the sub-menus.

Add File
It will display the usual Windows *Open File* prompt where you can navigate to the file.
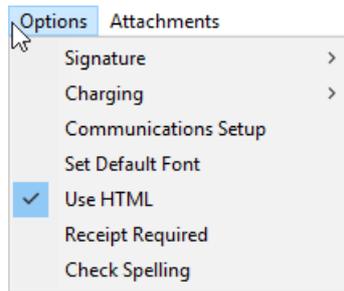

Add from DocMax
It will display the Select Document window in DocMax, and will already display a list of current documents belonging to the building. You can also use the Advanced Search function as well.

Clear
It will remove all of the attachments in the email.

Options Menu

This section covers the various functions and items under the *Options* menu.

Communication | Signature

StrataMax emails support signatures, which can be specific to the user or global for all users. Signatures are created and saved in the bottom section of the **Compose Email** screen, the default screen appearing when you open the **Communication** menu.

The global email signature is restricted in the **Security Setup** menu. The permission is 'Edit the global email signature'.

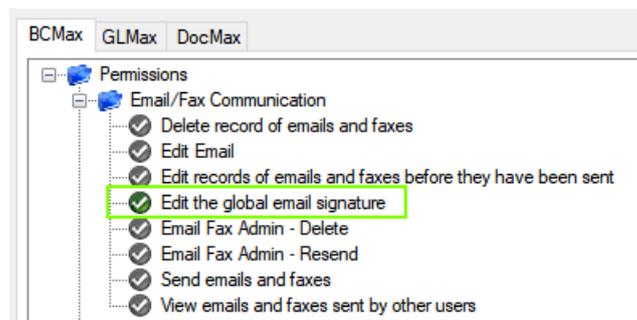

Personal vs Global Signature

The below instructions apply to both a Global Signature and a Personal Signature.

When running any global processes, for example, *Levy Distribution*, **Levy Arrears**, or **distribution of Meeting Agenda Packs**, the global signature may be required. If this is the case, then follow step**2** below. A personal signature can be set up and used for any singular emails sent.

To change either to a Personal or Global signature:

1. Click *Options > Signature* and tick *Use Personal Signature* option.
   - When ticked, the personal signature will be used on any emails sent from this user, and any changes made to the signature on the screen will only apply to the personal signature.
2. Click *Options > Signature* and remove the tick from the *Use Personal Signature* option. When **not** ticked, the global signature will be used, and any changes made will be saved to the global signature only.
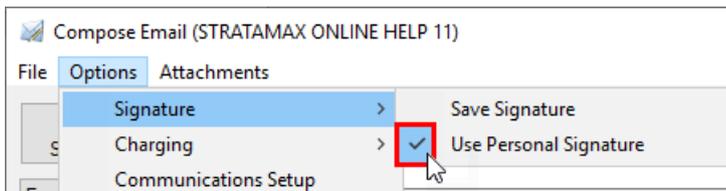

There are several ways to insert a signature, including images, text, web links, HTML, lines and tables. It also supports multiple font types for your text, which can be copied and pasted from other programs.

Creating Email Signatures

The StrataMax Communication screen supports the .NET technology, meaning signatures can be copied and pasted from your own Outlook without much need for further formatting.

> When inserting images, they need to be saved in a shared directory first (we recommend the StrataMax folder on your server's shared drive) and then inserted from there.

Communication | Charging

The charge options in the **Communication** menu will only apply to emails and SMS messages sent manually. Automated communications will be charged as per the settings in the *Disbursements* screen.
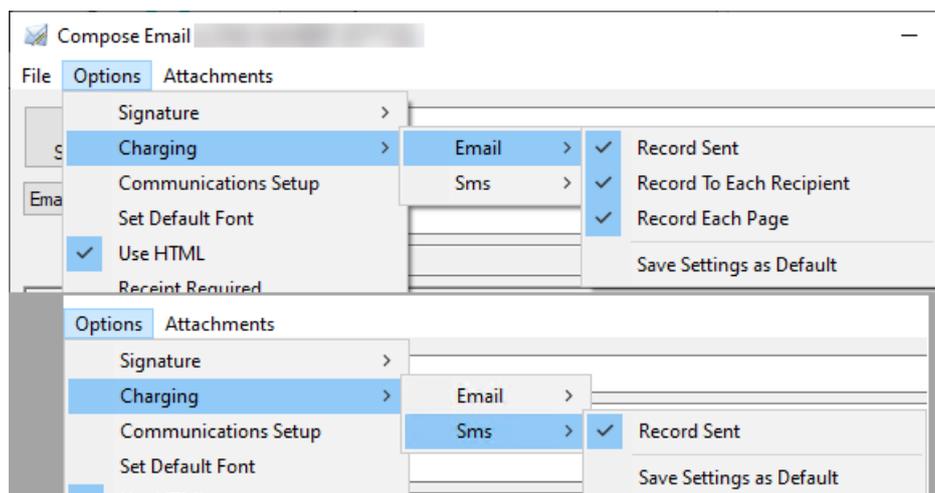

Record Set
Will record only a single email or SMS sent from the **Communication** menu, regardless of how many recipients are in the *To...* field. For example, one email to fifty recipients will only record a single email or SMS.

Record To Each Recipient
Will record every email sent from the **Communication** menu, for each recipient. For example, one email to fifty recipients will record all fifty emails.

Record Each Page

Will record each page of an attachment sent through the **Communication** menu.

> Once all required options have been set, the menu must be opened again to click *Save Settings as Default*.

Communication Setup

1. Search or select **Communication** menu.
2. Click *Options > Communication Setup*.

Communications Sender Details

The Sender Name and Email Address are configured under **Security Setup**, you may need to discuss with your StrataMax Administrator in your office to arrange for this detail to be updated.

1. **Sender Name** (User Setting configured under **Security Setup**): The name that will appear as the sender in the recipient's email client.
2. **Email address** (User Setting configured under **Security Setup**): The email address that the email will appear to be from.
3. **SMS Email** (User Setting): The email address that will appear as the sender on the SMS at the recipient's end.
4. **Personal Signature** (User Setting): Tick to enable insert the personal signature for all emails. This is effectively the same as clicking *Options > Signature > Use Personal Signature*.

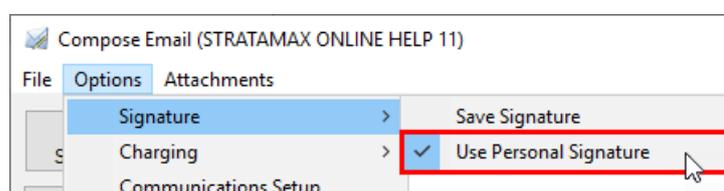

5. **Use HTML:** Allows the formatting and framework of an email to be displayed in a graphic / link

supported message type.

6. **Email Receipt:** Requests an email receipt for emails sent manually from the system. This does not include global or bulk functions like *Levies* or *EFTs Remittance Advices*.

7. **Always BCC Account Manager** (User Setting): When ticked it will ensure all emailed are BCC'd to the building's account manager.

Installation (Pausing and Delay Messages)
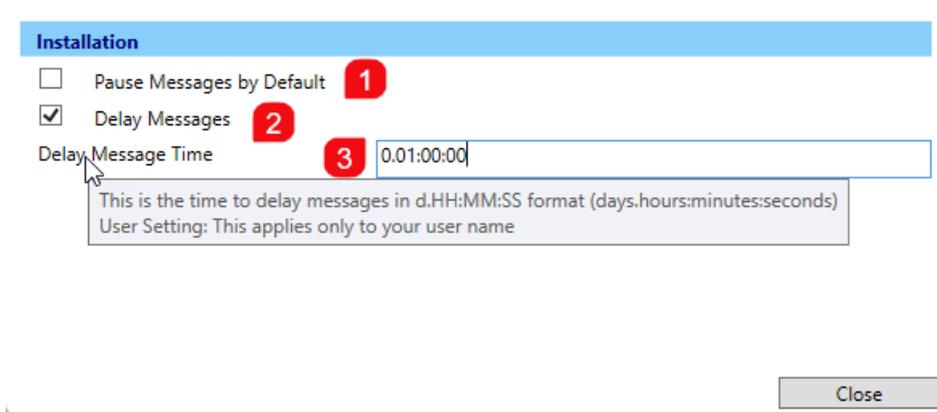

1. **Pause Messages by Default:** Will allow emails and faxes to be viewed in the Communication Log, and will not be sent without manual confirmation.
   ○ The *Security Setup* permission for this is named 'Pause Messages'.

2. **Delay Messages:** Will place a delay on all emails sent within StrataMax. It should be used in conjunction with the *Delay Message Time* field. Any emails that are subject to a delay, will appear with a *ready* Status in the Communication Log until the delay timer expires *(Global setting)*.
   ○ The *Security Setup* permission for this is named 'Delay Messages'.

3. **Delay Message Time:** Used in conjunction with the above setting. The field format is in **days.hours:minutes:seconds**.

Set Default Font

This opens the *Font* window where the default font for the body of the email can be chosen.
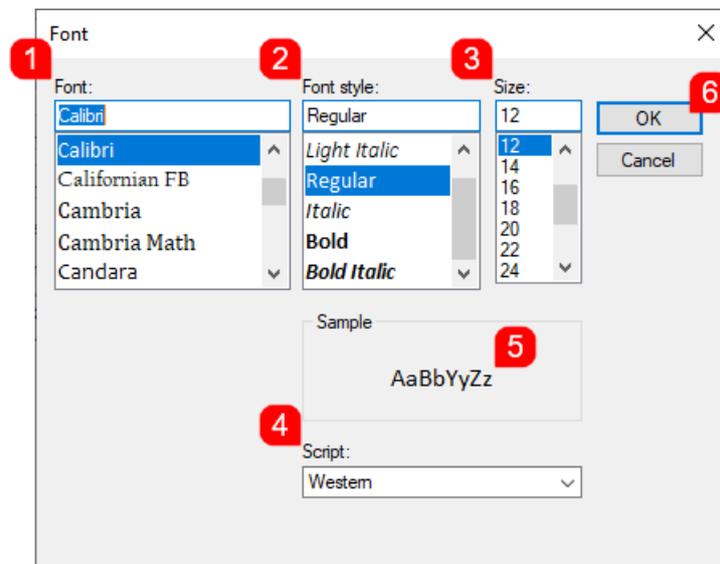

1. Select the *Font*.
2. Select the *Font Style*.
3. Select the *Size*.
4. Select the *Script* (*Western* is the default).
5. Check that the Sample looks like what is required.
6. Click *OK*.

Use HTML

This is ticked by default and is recommended. By removing the tick, the editing toolbar in the 'Compose Email' window will disappear. See step 5. in the *Compose Email* section at the top of this article.
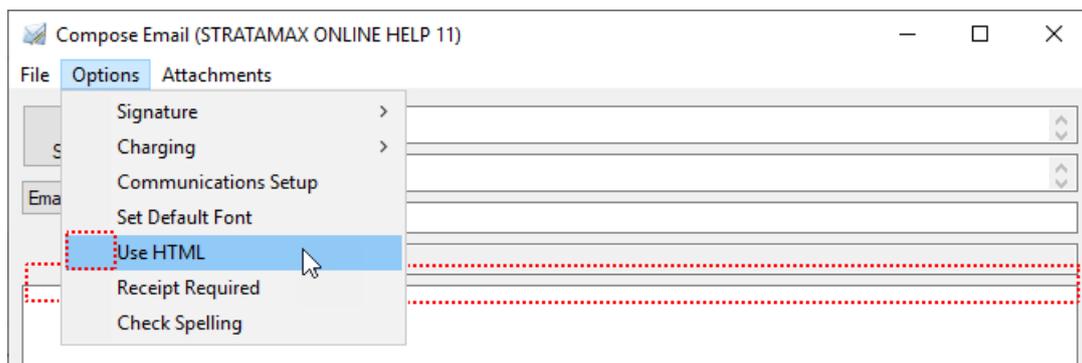

Receipt Required

When ticked, a delivery receipt will be requested from the email recipient. Similar to the *Request a Delivery Receipt* setting found in Outlook.

Check Spelling

StrataMax can also check the spelling of emails before being sent. Just click this option right before click the *Send* button.

1. If any misspelled or unknown words are detected, it will display the content of the email, with any unknown/misspelled words in red.
2. To change the word you can either type the replacement word manually into the *Replace with:* field or click one of the words in the *Suggestions:* field, then click the *Replace* button.
3. Click the *Replace All* button to replace this word throughout the whole email.
4. Clicking *Ignore* or *Ignore All* ignore the spelling error.
5. Clicking *Add* will add the word to the dictionary and it will no longer be flagged as an incorrect word in future emails from the **Communications** menu.
6. The *Options* will display the general options available for how the dictionary in StrataMax works, and what configuration is available.

File | View Log

The *Communication Log* displays a history of any email that has been sent from within StrataMax. This includes emails that were sent manually or via various processes, such issuing of levies. This can be used to check email addresses and dates for troubleshooting emails that an owner claims they didn't receive for example.

The top section displays a list of emails in a table with various headers. An important header to make a note of is the *Status* header. Different *Status'* have different meanings, which affect which actions can be performed on that email. The bottom section contains the body of the email.

1. From with the **Communication** window, click *File > View Log*.
2. Use the filters on the right side:
   - *Date from:* and *Date to:* fields to select a date range.
   - *From: Current User* tick box should <u>not</u> be ticked to display email from all StrataMax users.
   - *Limit to # emails* field to display a certain number of emails.
   - *Recipient:* Field to enter part of or the whole name of a recipient, which will search the *Recipient* column after clicking the *Refresh* button.
3. The body of the email will be displayed in the bottom section of the screen.
4. The *Attachment* field in the top right will display any files that are attached to the email selected from the list. Double-click the file to open it, or click the *View Attachment* button.
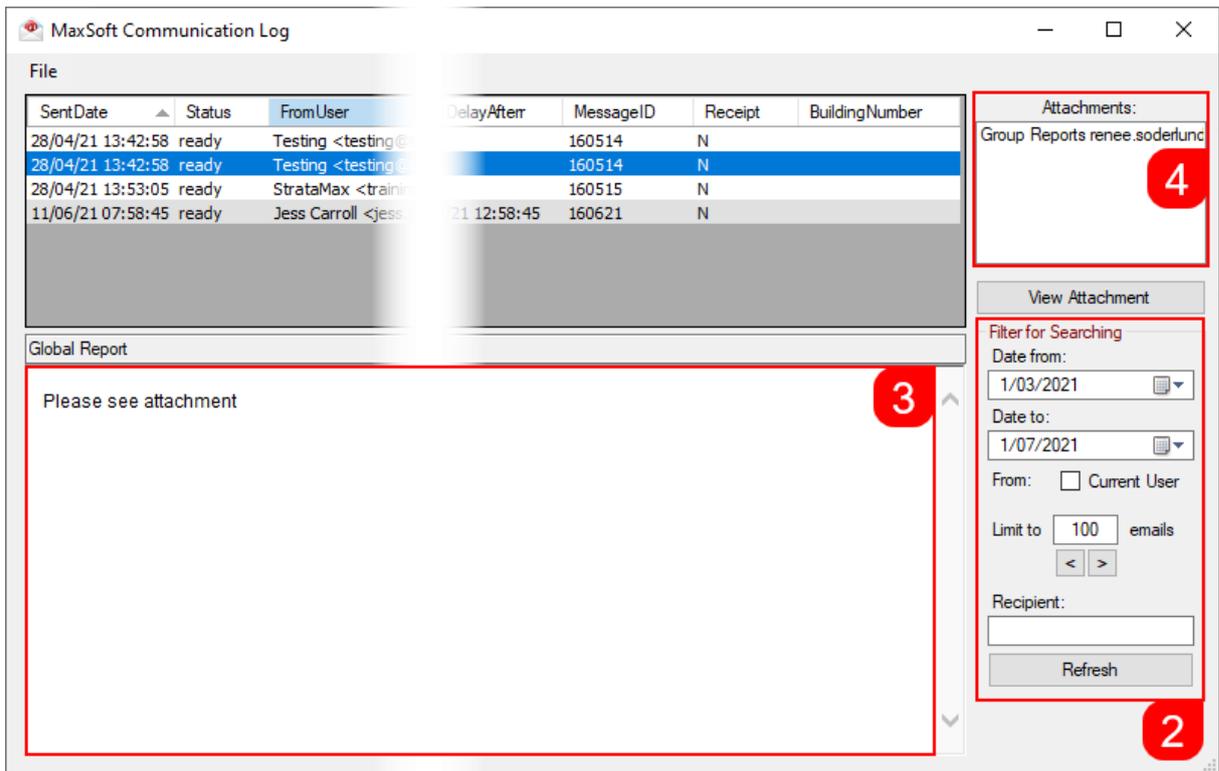

5. Right-clicking an email in the list will display a sub-menu with contextual options, so some of them won't always be available:
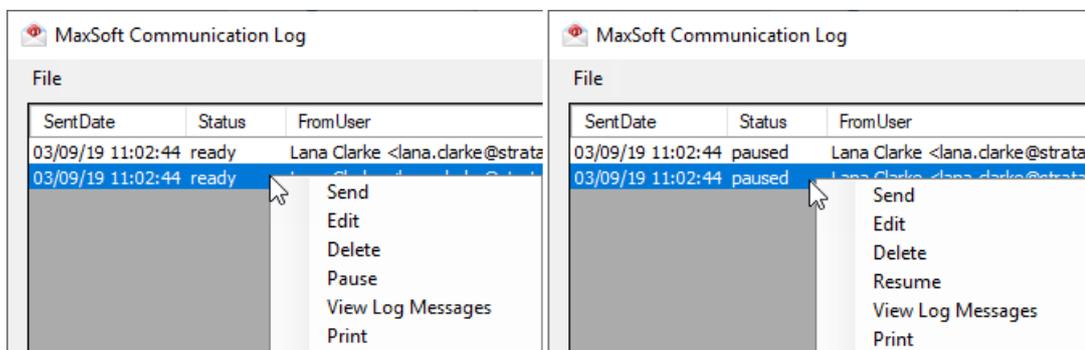

Send
Will send an email that has a Status of *ready,* or if it has a status of *Sent* it will ask you if you would like to send it again.

Edit
Will let you edit the body of an email that has a Status of *ready* or *paused*. The editing is done in the bottom section of the screen, and the *Save Changes* button must be clicked before sending the email. Click the *Cancel Edit* button to discard any changes.

Delete
Will place the email into a *deleted* Status. A confirmation will display before deletion. If the email was

previously in a *ready* Status, it will <u>not</u> be sent after the delay expires.

Pause/Resume
Changes an email Status of from *ready* to *paused,* or vice versa.

View Log Messages
Displays a more detailed breakdown of the different stages of the email.

Print
Will print the body of the email. The Windows printer dialogue will appear first to let you change any preferences.

View Log | File Menu

Export to file
Exports the current log to a .xml file, which can be opened in Excel.

View all errors
If there are any errors in the log, using this option will open a new window with only the emails that have errors.

Resend Todays Failed Messages
Will attempt to resend any messages that failed that day.

File | Search Logs

This menu has been designed for users to locate specific emails by apply filtering criteria, and narrow down the searches to specific buildings and/or users. *Columns*, *Sort Order*, and the maximum number of results can be limited from 10 to unlimited. Results can be restricted with the following fields:

- Building Number
- Date/Time
- From
- Id
- Receipt Requested
- Send Delay After
- Send Status
- Subject
- To

- Type
- User (this will only be available if the user searching has permissions to search other users)

1. Open the **Communication** menu and click *File > Search Logs*.
   - By default, some **Filters** are already added, so if those meet your requirements, simply click the *Refresh* button.
   - If more **Filters** need to be added, proceed to the next step.
2. Click the green 'plus' button to add another filter or the red minus button to remove a filter.
   - Select the required **Field** from the drop-down list.
   - Select the relevant **Condition**, which is dynamic and will vary depending on which **Field** you have selected.
   - Select the appropriate **Value**, which is dynamic and will vary depending on which **Field** and **Condition** you have selected.
3. Click the *Advanced* button to reveal these tabs:
   - *Columns* lets you choose which columns you'd like displayed in the results window.
   - *Sort Order* lets you choose the order in which you'd like your results displayed. Newest to Oldest, by building number, etc.
   - *Advanced* has a drop-down menu to choose *Maximum Number of Records to Retrieve,* varying from 10 to unlimited.
4. After clicking the *Refresh* button, the results will be displayed.
5. Click on one of the emails to display its contents as well as a links to any attachments in the preview window on the right.
6. Click the *Export* button to export the table of results to Excel.

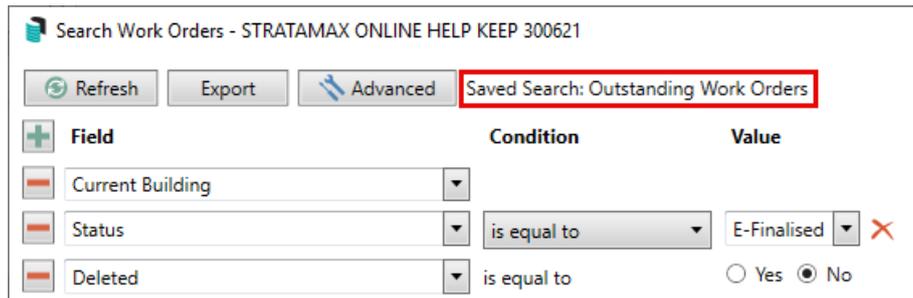

Search Logs | Saved Searches

'Saved Searches' are designed for convenience so that you can save a selection of fields, columns, and a specific sort order so that it can be loaded later. There is also a tool to assist with quick-finding fields of text information. Use the top right corner and enter text into this field to search. Click *Find First* or *Find Next* to locate results.

'Saved Searches' can also be set as the 'default' search for the selected screen. This means that the selection of fields, columns, and specific sort order will be the one chosen whenever the menu screen/icon is selected.

'Saved Searches' can be saved for the current user, globally (accessible to all users), or for a specific user group.

> If a Saved Search is loaded/opened this will be noted at the top of the search screen.

Saved Searches | Security Setup Permissions

A security permission will either allow or deny individual *Users* or *User Groups* access to create or delete a search. The permission is called 'Save Group and Saved Searches' under the 'Menus' category in **Security Setup**. You can also type the word 'Search' into the filter field and click the *Filter* button to see the permission.
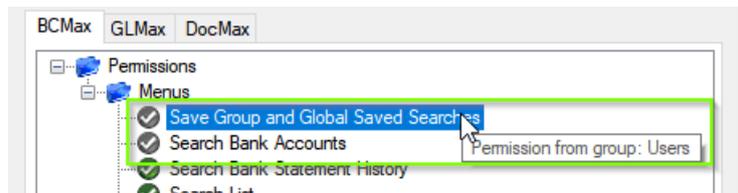

If the *User* or *User Group* do not have the permission set to 'Allow', then the ability to save a search for all users or a user group will be inactive.
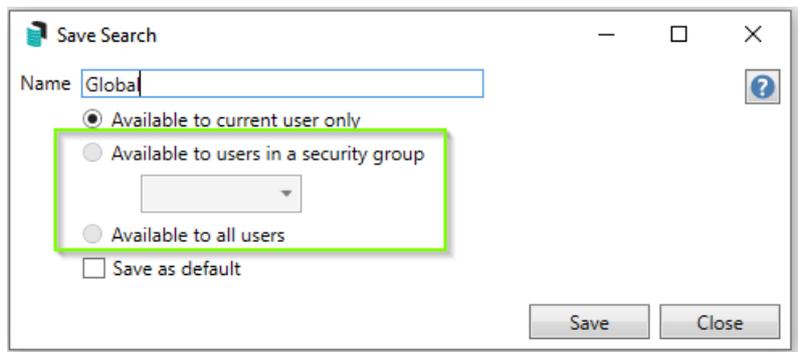

Saved Searches | Set up a new Saved Search

1. Configure the required fields and click the *Refresh* button to display the required data.
   - Optionally click the *Advance* button to also configure the displayed columns, and specific sort order.
2. Click the *Refresh* button to display the data.
3. Click the *Save Search As* button, and the 'Save Search' window will appear.
4. Enter a 'Name'.
5. Select one of the three radio buttons, depending on your requirement:
   - *Available to current user only* will save the search for the current user only.
   - *Available to users in security group* will save the search for the *User Group* selected from the drop-down (this radio button is only available if you have the right permission, and the *User Groups* available in this list are limited to the *User Groups* that you are a member of).
   - *Available to all users* will save the search for all StrataMax users (this radio button is only available if you have the right permission).
6. Optionally tick the *Save as default* box to load this 'Saved Search' whenever the menu screen / icon is opened.

Saved Searches | Load or Delete a Saved Search

1. At the bottom of the screen, click the *Load/Delete Search* button.
2. In the 'Load Search' window, click the blue *Load* button to load the *Saved Search*, or click the red cross button to delete the *Saved Search*.
3. If you click the *Load* button, the 'Load Search' window will disappear, and the screen will refresh automatically and load the *Saved Search* data.
4. If you click the *Delete* button, a confirmation pop-up will appear; Click *Yes* to confirm the deletion.

> When a Saved Search is loaded/opened, the Saved Search name will be noted at the top of the search screen.

Saved Searches | Edit a Saved Search

1. If the *Saved Search* you want to edit has been set as the default search, it should be on screen already, and you can proceed to the next step. Otherwise click the *Load/Delete Search* button.
2. In the 'Load Search' window, click the blue *Load* button.
3. Now make any changes required to the required fields and optionally click the *Advance* button to

also configure the displayed columns, and specific sort order.

4. Click the *Refresh* button to display and check the data.
5. Click the *Save Search* button to save the applied changes.

SMS Functionality

To enable the SMS functionality within StrataMax you will need to establish an account with a telecommunications service provider to send a message. The StrataMax Support team will then need to configure the provider's domain address to forward emails to for conversion into SMS messages. The service provider then forwards these messages to a mobile phone as an SMS.

When speaking with the service provider, please be fully aware of the costs involved in sending messages via SMS, as costs vary depending on the account type as well as how many SMS you plan on sending each month. All charges to both the building and the recipient should be confirmed at the time of arranging an account with a telecommunication service provider.

> StrataMax takes no responsibility for high usage or volume charges encountered as a result of this service. It would be worth considering charging a fee to owners or recipients to warrant utilising this feature.

This option must be investigated to its full potential for integration between StrataMax and the SMS service provider to ensure connectivity.

Important information for sending an SMS through StrataMax:

- There is no Subject line on an SMS message, only text from the body of the email window.
- Formatting will not be kept; like standard SMS messages, it will be treated as one line, as this is how the recipient will receive it.
- The Report Distribution window will allow multiple buildings to send an SMS based on the SMS template set.
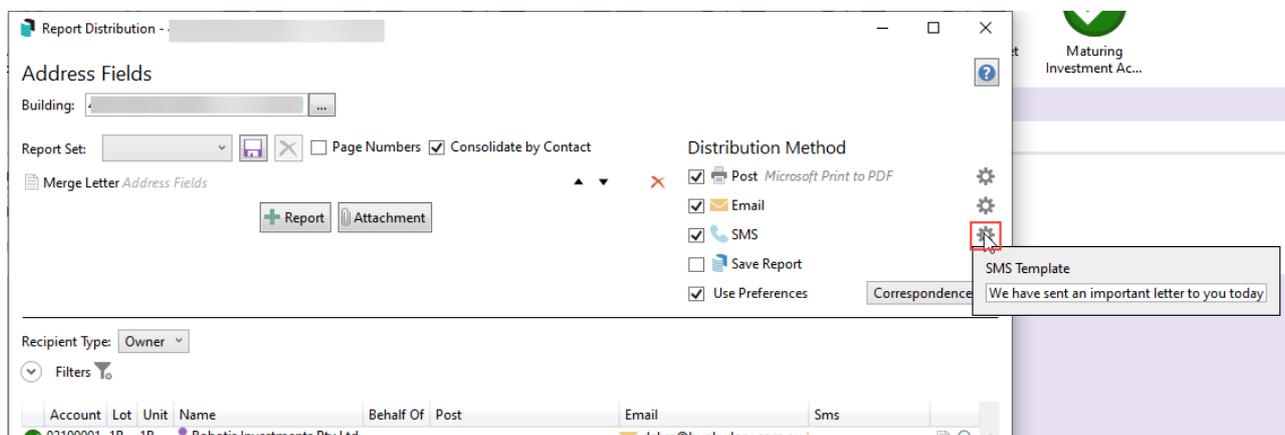

- The alternative method is available via the **Communications** menu, which is a per building option.
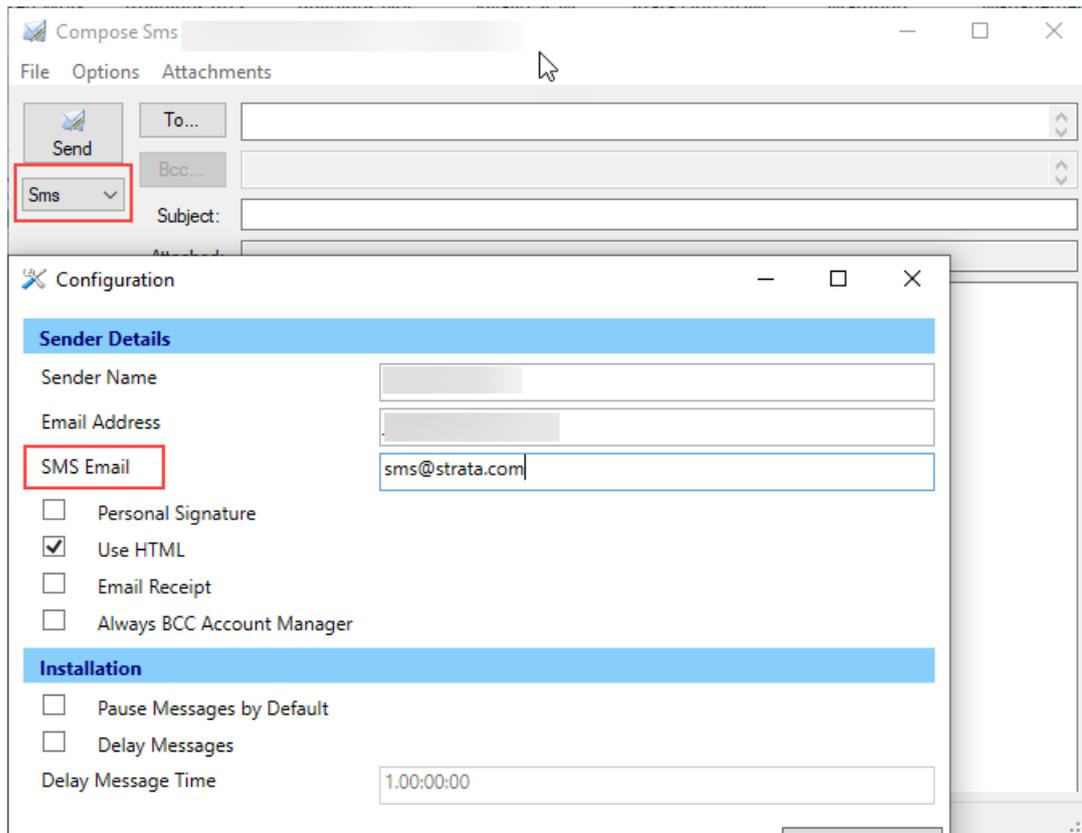

To initiate the SMS option, please email the StrataMax Support Team at *support@stratamax.com.au*

See the SMS Broadcast website for more information: *https://www.smsbroadcast.com.au/*
