AI in StrataMax

Last Modified on 26/10/2026 4:47 pm AEST

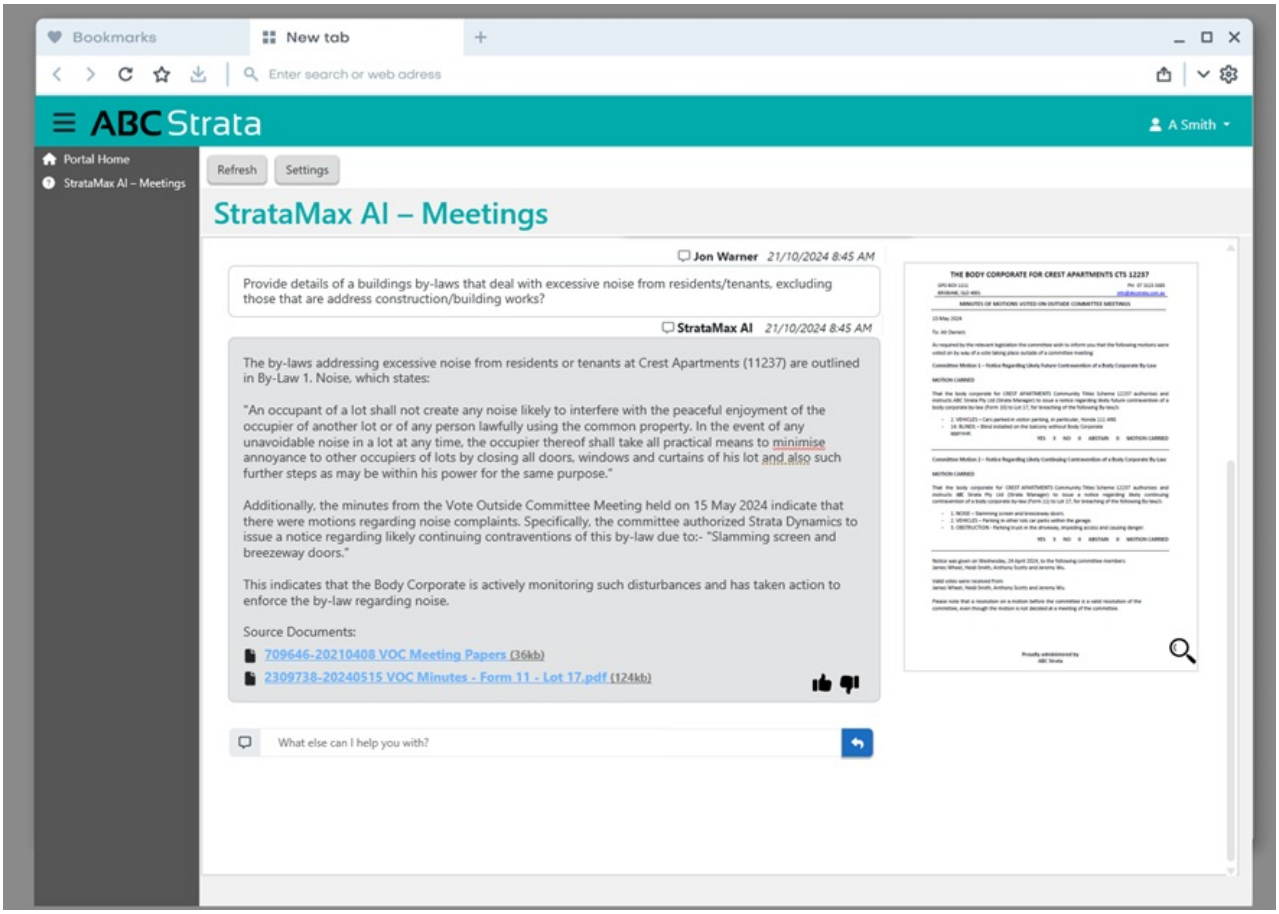

StrataMax is thrilled to embark on an AI-powered transformation, integrating cutting-edge technology into our platform. This page offers a glimpse into some of the innovative projects currently in development and those on the horizon. As time frames become available we will update this page accordingly.

All information and screenshots may be updated as development progresses.

Chatbot - Meeting Documentation (Released in 2026)

Meeting documents often contain extensive information that a manager may not be familiar with for various reasons, such as onboarding a new building or appointing a new account manager. Soon, integrated within the StrataMax Portal, your team members will be able to use text chat to quickly query meeting documents. Some of the functions included:

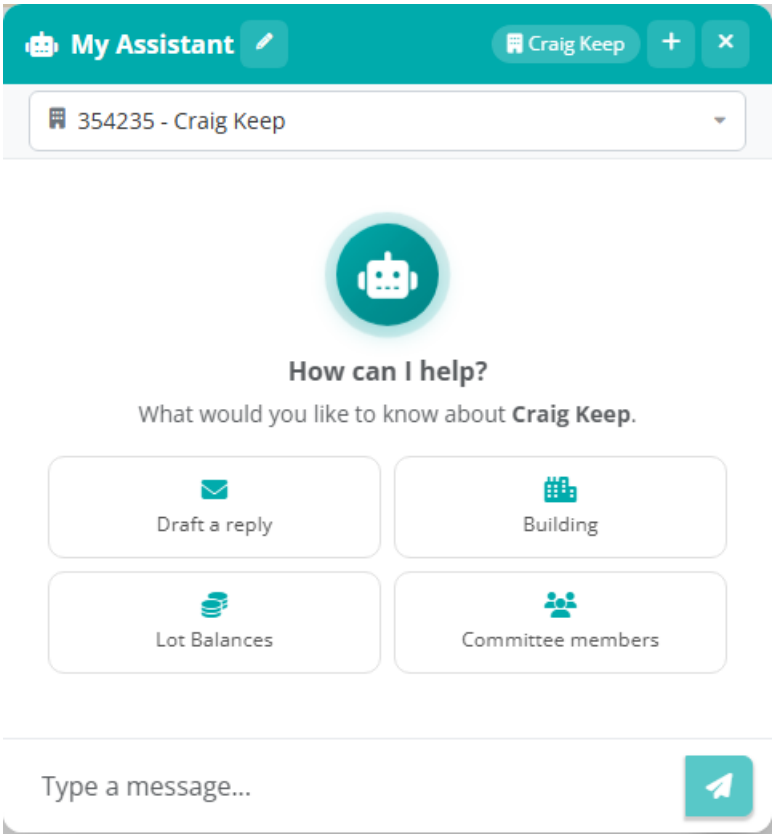

- Integrated with DocMax documents.
- Chat style interface allowing follow-up queries, refinement of what is being asked.
- Limit queries based on buildings and date ranges.
- Answers provided including links to the documentation that was used to provide the answer, along with a document preview.

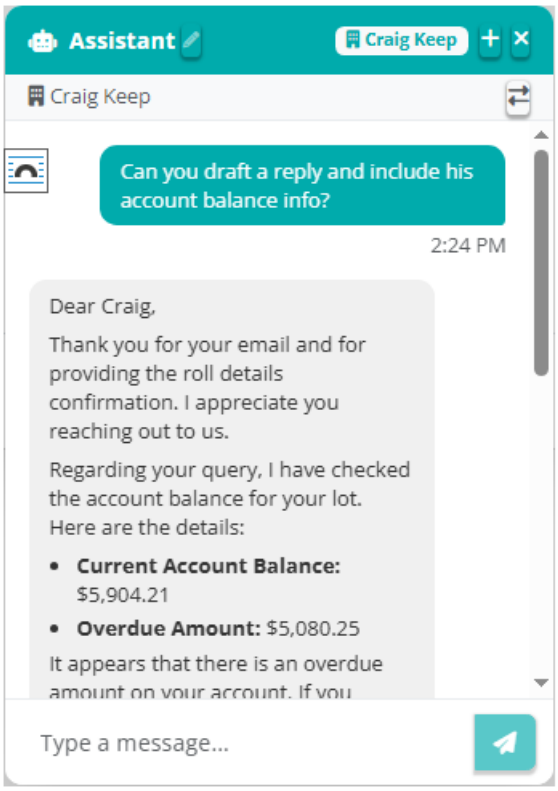

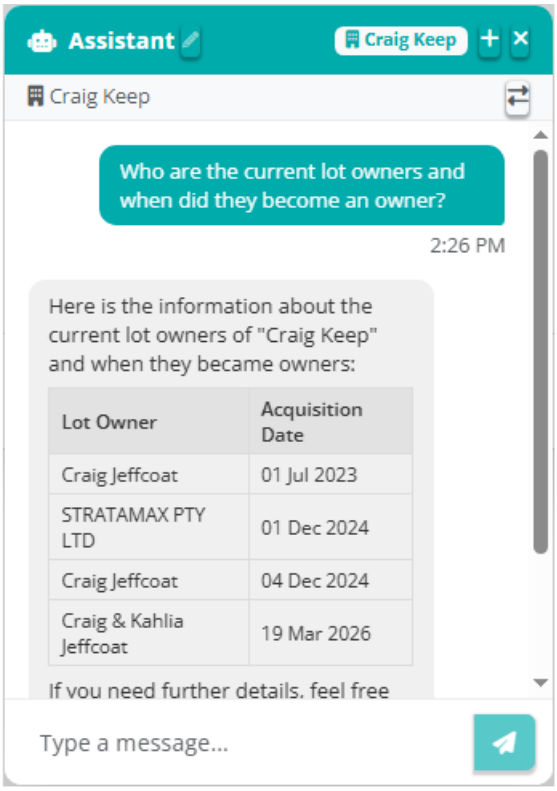

AI Assistant

This will initially be released as a preview feature, and is subject to change.

Due to be released late 2026 use the AI Assistant directly from the Outlook add-in or the StrataMax Managers Portal to query a wide range of data available in StrataMax to assist with emails and if required compose new emails or draft replies for you.

AI Invoice Data Capture

StrataMax is exploring AI-driven solutions to streamline invoice data entry. By integrating with DocMax, we aim to reduce manual effort, while ensuring work queues are available to efficiently validate AI-captured data and fill in any missing fields.
